Unit 11 Seminar Preparation: Module Reflection

*Reviewing your degree programme as a whole, reflect on one module in particular that has impacted/will impact your professional practice. Use any reflection format described in the "Reflective Piece" section of the **e-Portfolio guide**.*

Answer:

All modules that I have completed significantly enhanced my professional practice. Specifically, focussing on programming, the module "Object-Oriented Information Systems" empowered me to design and build programs using principles of Object Orientation. Furthermore, I learnt how to design and create a relational database and connect my application to this. These skills proved invaluable in my first software engineering role, where I was required to program an application that automated the testing of electronic equipment during manufacturing of a product. Whilst I was able to immediately use these skills, they will also stand me in good stead for future endeavours. The engineering techniques learnt are universal software development tools, therefore, can be applied to a variety of other technologies and programming languages.
